

Healthy Scenario — Dashboard Snapshot

RESEARCH / SIMULATION OUTPUT · NON-CLINICAL
PROTOTYPE

Mon, Oct 05 · 19:17

Sub-scores are weighted composites from existing sensor parameters. FAI and CAC, when entered, contribute to Atherosclerosis risk only. Not individually clinically validated — research simulator

Mon, Oct 05 · 19:17

* Weighted contribution points toward 0-100 Coronary Artery Disease (CAD) Risk Score

Direct captures from the running application under the **Healthy — Baseline** profile. The upper panel displays resting hemodynamic parameters, low-risk imaging biomarkers, and the composite CAD score. The lower panel shows longitudinal score stability, cardiac intervals, serum lipid readouts, in-app EchoNext neural network rhythm classification (NORM), and the multi-factorial risk contribution breakdown.

Precision Cardiovascular Risk Intelligence Platform

Healthy Scenario — Key Dashboard Summary & Interpretation

Scenario: Healthy (Healthy – Baseline)

RESEARCH / SIMULATION OUTPUT · NON-CLINICAL PROTOTYPE

CURRENT RISK SCORE

19 / 100

Low Risk Tier (0–20)

BLOOD PRESSURE

117 / 78 mmHg

Normal / Healthy BP

HEART RATE & HRV

68 BPM · 70 ms

Normal Sinus Rhythm

CT BIOMARKERS

FAI -82 HU · CAC 0

Normal Inflammation & Zero Calcium

DASHBOARD PARAMETER	RECORDED VALUE	STATUS / CLASSIFICATION	CLINICAL / SIMULATOR CONTEXT
Current Risk Score	19 / 100	Low Risk	Composite risk assessment engine output
Risk Band & Confidence	Low Risk Band	100% Confidence	Falls within the baseline 0–20 minimal risk band
7-Day Risk Trend	Score: 19 (Baseline)	Stable Trajectory	Multi-point recorded historical simulator stability
Heart Rate (HR)	68 BPM	Normal Sinus	Standard adult resting cardiac frequency
Blood Pressure (BP)	117 / 78 mmHg	Normal / Healthy	Optimal resting hemodynamics (<120/80 mmHg)
Heart Rate Variability	70 ms (RMSSD)	Healthy	High parasympathetic tone and autonomic flexibility
Fat Attenuation Index (FAI)	-82.0 HU	Normal	Well below the -70.1 HU inflammatory cutoff
Coronary Calcium (CAC)	0 AU	None (<5% risk)	Zero detectable vascular calcification (Agatston)
Disease-Specific Sub-Scores	Ischemia: 0 · Arrhythmia: 0	Healthy	Atherosclerosis: 30 (Watch) · HTN: 5 · HF: 4
Main Risk Contributions	Total: 19 points	Distributed	ApoB (7 pts), BP (2 pts), HRV (2 pts), Stress (2 pts)
EchoNext Deep Learning	Classified: NORM	SHD Index: 5%	In-app 1D ResNet-34 neural rhythm classification

Short Clinical & Simulation Interpretation

In this Healthy baseline scenario, all primary cardiovascular indicators reflect an optimal resting physiological profile. Resting hemodynamics (Blood Pressure 117/78 mmHg, Heart Rate 68 BPM) and heart rate variability (70 ms) confirm balanced autonomic modulation with preserved vagal tone. Advanced imaging markers corroborate the absence of active coronary inflammation (FAI -82.0 HU) and structural vascular disease (CAC 0 AU). The simulator's composite risk engine calculates a score of 19 (Low Risk), driven only by minor baseline contributions, while in-app deep learning inference confirms normal rhythm morphology with a minimal Structural Heart Disease Index of 5%.

Research / simulation output — not a clinical diagnosis. This document is generated from simulated physiological profiles for educational, technical evaluation, and algorithm verification purposes only. It should not be used as an independent clinical diagnosis or for patient treatment planning.
